About Course

jQuery is a lightweight, "write less, do more", JavaScript library. The purpose of jQuery is to make it much easier to use JavaScript on your website. jQuery takes a lot of common tasks that require many lines of JavaScript code to accomplish, and wraps them into methods that you can call with a single line of code.

jQuery is one of the longest-running and most influential JavaScript libraries on the web. A staggering 78% of the top 1 million websites use jQuery in some way, according to BuiltWith. As for the most talked-about JavaScript library today, React, it's used by a relatively paltry 14%
